**Introduction**

Passed in 1973, the U.S. Endangered Species Act (ESA) includes strong protections for listed threatened and endangered species and has helped stabilize and recover hundreds of listed species, such as the bald eagle and gray whale (Taylor, Suckling & Rachinski, 2005; Schwartz, 2008; Suckling et al., 2016). In part because of its strong protections, the ESA has engendered substantial opposition from industry lobby groups, who perceive the law as threatening their profits and have been effective in generating opposition to species protections among members of the U.S. Congress. One common refrain from opponents of the ESA in Congress and elsewhere is that the law is a failure because only 2% of listed species have been fully recovered and delisted (Bishop, 2013).

The number of delistings, however, is a poor measure of the success of the ESA because most species have not been protected for sufficient time such that they would be expected to have recovered. Suckling et al. (2016), for example, found that on average listed birds had been protected just 36 years, but their federal recovery plans estimated an average of 63 years for recovery. Short of recovery, a number of studies have found the ESA is effectively stabilizing or improving the status of species, using both biennial status assessments produced by the U.S. Fish and Wildlife Service for Congress and abundance trends (Male & Bean, 2005; Taylor, Suckling & Rachinski, 2005; Gibbs & Currie, 2012; Suckling et al., 2016).

In addition to recovering species, one of the primary purposes of the ESA is to prevent species extinction. Previous studies indicate the ESA has been successful in this regard (McMillan & Wilcove, 1994; Scott et al., 2006). As of 2008, the ESA was estimated to have prevented the extinction of at least 227 species and the number of species delisted due to recovery outnumbered the number of species delisted for extinction by 14-7 (Scott et al., 2006). In this study, we identified all ESA listed species that are extinct or possibly extinct to quantify the number of species for which ESA protections have failed and use these figures to update the estimated number of species extinctions prevented. This is the first study in over 20 years to compile data on extinction of ESA listed species, providing an important measure of one of the world's strongest conservation laws (McMillan & Wilcove, 1994).

**Methods**

To identify extinct or possibly extinct ESA listed species, we examined the status of all 1,747 (species, subspecies and distinct population segments) U.S. listed or formerly listed species, excluding species delisted based on a change in taxonomy or new information showing the original listing to have been erroneous. We determined species to be extinct or possibly extinct based on not being observed for at

by 14-7 (Scott et al., 2006). In this study, we identified all ESA listed species that are extinct or possibly

### Introduction

Passed in 1973, the U.S. Endangered Species Act (ESA) has helped conserve and recover numerous species and has helped restore ecosystems. However, the ESA has also been criticized for its impact on the economy and for its impact on the environment. In this article, I will discuss the impact of the ESA on the economy and the environment, and I will discuss the impact of the ESA on the environment.

# Highlight & Note Artikel

The screenshot shows a web browser displaying a document from Gale Academic OneFile Select. The page title is "Extinction and the U.S. Endangered Species Act". The authors listed are Noah Greenwald, Kieran F. Suckling, Brett Hartl, and Loyal A. Mahrt. The document is from the journal "PeerJ" and was published on April 22, 2018. The document type is "whole" and its length is 3,821 words. The DOI is 10.7717/peerj.5800.

The article's introduction is highlighted in yellow. It states: "Passed in 1973, the U.S. Species Act (ESA) includes strong protections for listed threatened and endangered species and has helped stabilize and recover hundreds of listed species, such as the bald eagle and gray whale (Taylor, Suckling & Rachlinski, 2005; Schwartz, 2008; Suckling et al., 2016). In part because of its strong protections, the ESA has engendered substantial opposition from industry lobby groups, who perceive the law as threatening their profits and have been effective in generating opposition to species protections among members of the U.S. Congress. One common refrain from opponents of the ESA in Congress and elsewhere is that the law is a failure because only 2% of listed species have been fully recovered and delisted (Bishop, 2013).

The number of delistings, however, is a poor measure of the success of the ESA because most species have not been protected for sufficient time such that they would be expected to have recovered. Suckling et al. (2016), for example, found that on average listed birds had been protected just 36 years, but their federal recovery plans estimated an average of 63 years for recovery. Short of recovery, a number of studies have found the ESA is effectively stabilizing or improving the status of species, using both biennial status assessments produced by the U.S. Fish and Wildlife Service for Congress and abundance trends (Male & Bean, 2005; Taylor, Suckling & Rachlinski, 2005; Gibbs & Currie, 2012; Suckling et al., 2016).

In addition to recovering species, one of the primary purposes of the ESA is to prevent species extinction. Previous studies indicate the ESA has been successful in this regard (McMillan & Wilcove, 1994; Scott et al., 2006). As of 2008, the ESA was estimated to have prevented the extinction of at least 227 species and the number of species delisted due to recovery outnumbered the number of species delisted for extinction by 14:7 (Scott et al., 2006). In this study, we identified all ESA listed species that are extinct or possibly

On the right side of the page, there is a "Highlights and Notes" section with a preview of a highlight: "Passed in 1973, the U.S. Species Act (ESA) includes strong protections for listed threat...". Below this is a button to "View All Highlights and Notes".

Below the main text, there are sections for "EXPLORE" and "More Like This". The "More Like This" section lists two related articles: "Extinction risk of narrowly distributed species of seed plants in Brazil due to habitat loss and climate change" (PeerJ, July 22, 2018) and "KENYA LAUNCHES 'IVORY TRADE IS A RIP-OFF' CAMPAIGN" (States News Service, Aug. 2, 2018). The "EXTINCTION BY THE NUMBERS: THREATS TO ENDANGERED SPECIES MORE THAN..." article (States News Service, July 24, 2018) is also listed with a "See More" button.

The "Related Subjects" section includes: Biodiversity conservation, Endangered species, Extinction (Biology), and Wildlife conservation.
